

IMPORTANT!

Highly recommended for security reasons, easy and fast handling:
 PROPs should be transported from the backstage area in **MODULS** not bigger than 3 m long 2 m wide/deep, may not be higher than 4 m with a max. load of 400 kg/sqm!
 It is highly recommended to have **all props transported on wheels** from the backstage area to the stage area - then lifted on the stage from the „black-line“ as described on the right. The wheels can be secured on stage by the dancers if necessary.

Props can only be lifted on or dismantled from the stage backline as shown here. Not from either sides.

For security reasons all Props must be approved by the Organizer's "Backstage Director" after having been mounted before being moved for the competition.
